Wat is een generisch geneesmiddel?

Als een farmaceutische bedrijf een nieuw geneesmiddel ontwikkelt, krijgt het voor dit origineel geneesmiddel een patent. Daardoor wordt dit bedrijf het enige dat dat geneesmiddel op de markt mag brengen.

Als het octrooi van het originele geneesmiddel afgelopen is, kunnen andere firma's een kopie van dit geneesmiddel produceren onder een andere naam, die vaak gebaseerd is op de wetenschappelijke naam van zijn werkzame stof. Het is dan een generisch geneesmiddel.

Zoals elk geneesmiddel moet dit worden geregistreerd door de Federale Overheidsdienst Volksgezondheid. Daarvoor moet het beantwoorden aan een aantal kwaliteitsvoorwaarden: dezelfde werkzame stof bevatten als het originele geneesmiddel, dezelfde dosering (hoeveelheid werkzame bestanddelen per geneesmiddel), dezelfde vorm (bijvoorbeeld tablet, capsule, siroop...). De prijs moet minstens 30% lager zijn dan die van het originele geneesmiddel.

Waarom generische geneesmiddelen kopen?

➤ Ze zijn gelijkwaardig → dus van dezelfde kwaliteit

De toedieningswijze (tabletten, capsules, siroop, zalf...) en de dosering van het geneesmiddel (hoeveelheid werkzame stof per eenheid) zijn identiek.

Bovendien moet het generisch geneesmiddel met dezelfde snelheid en in dezelfde hoeveelheid als de originele geneesmiddelen in het menselijk lichaam verspreid worden om tot dezelfde effecten te komen.

➤ Ze zijn goedkoper

Het generisch geneesmiddel moet minstens 30% goedkoper zijn dan het originele geneesmiddel.

Door het systeem van de "referentierugbetaling" is het originele geneesmiddel niet alleen 30% duurder dan het generische geneesmiddel bij aankoop, maar bedraagt de terugbetaling maar evenveel als bij het generische geneesmiddel. Het verschil in remgeld bedraagt dus nog meer dan 30%.

1. Gebruikstips

Neem deze gids mee naar uw arts of apotheker. Gebruik nooit geneesmiddelen zonder advies van uw arts of apotheker.

Als uw arts u een **origineel** geneesmiddel voorschrijft, kunt u met dat voorschrift geen generisch geneesmiddel kopen! Als u een generisch geneesmiddel wilt kopen, moet u aan uw arts vragen om een **generisch** geneesmiddel voor te schrijven of enkel de naam van de **werkzame stof** (DCI) te vermelden op het voorschrift.

2. Hoe wegwijs raken in deze gids?

U kunt deze gids op 2 verschillende manieren gebruiken.

1) Kent u het **referentiegeneesmiddel** en zoekt u een goedkoper geneesmiddel?

→ Zoek de naam van het referentiegeneesmiddel in de "Alfabetische lijst van specialiteiten en werkzame bestanddelen" (vanaf p. 197 van deze gids). Daar vindt u het **nummer van een tabel** in deze gids waarin alle andere geneesmiddelen met dezelfde werkzame stof vermeld worden.

2) Zoekt u de naam van een goedkoper geneesmiddel op basis van een **ziekte**?

→ Zoek in de "Index van ziekten" (p. 6). U vindt er de verschillende werkzame stoffen tegen deze ziekten en het **nummer van de tabel** met geneesmiddelen tegen deze ziekte.

3. Lijst van geneesmiddelen per werkzame stofnaam (de "tabellen")

De geneesmiddelen zijn gerangschikt per tabel volgens de werkzame stof. Ze zijn ook ingedeeld per dosering van de werkzame stof. Let dus op de dosering van uw geneesmiddel als u deze gids gebruikt!

Om de tabellen te begrijpen, leest u **van links naar rechts**:

→ de letters (A), (B) en (C) duiden de terugbetalingscategorie van het geneesmiddel aan. Afhankelijk van de omstandigheden kan eenzelfde geneesmiddel in 3 verschillende categorieën staan.

(A): "levensnoodzakelijke" geneesmiddelen voor sommige zware en chronische ziekten (meestal gratis)

(B): "nuttige" geneesmiddelen op sociaal en geneeskundig vlak (85% terugbetaald voor wie recht heeft op een verhoogde tegemoetkoming, 75% voor gewoon verzekerden)

(C) "minder nuttige" geneesmiddelen op sociaal en geneeskundig vlak (tussen 50 en 20% terugbetaald)

→ de naam van het geneesmiddel. Het referentiegeneesmiddel is in het **rood** gedrukt om aan te tonen dat het duurder is.

→ een kolom met de letters G, C, R of O. Betekenis van deze letters:

G: generische specialiteit;

C: kopie;

R: originele specialiteit, opgenomen in het referentierugbetalingssysteem (in het rood) of waarvoor de producent de prijs heeft verlaagd (in het zwart);

O: originele specialiteit, NIET opgenomen in het referentierugbetalingssysteem (in het rood).

→ De kolom prijs staat voor de **kostprijs per verpakking** voor de gewoon verzekerden.

→ De kolom met het bedrag van het remgeld voor de gewone verzekerden (per vergoedingscategorie).

→ De laatste kolom met het indexcijfer geeft de prijs per eenheid weer voor de gewone verzekerden.

4. Twee voorbeelden

→ Een generisch geneesmiddel zoeken als u de naam van het **referentiegeneesmiddel** kent

Stel dat u het geneesmiddel Voltaren gebruikt. In de "Alfabetische geneesmiddelenindex" (p. 199-234) ziet u "Voltaren - 0209". Dat betekent dat u in tabel 0209 van deze gids (zie p. 84) de geneesmiddelen vindt die minder duur zijn dan Voltaren. Tabel 0209 bevat geneesmiddelen met als werkzame stof Diclofenac. Voltaren (in het rood) staat onder originele specialiteit opgenomen in het referentierugbetalingssysteem (in het rood). Let op de dosering van de werkzame stof en op de verpakking.

→ Een geneesmiddel zoeken op basis van een **ziekte**

U kunt bijvoorbeeld ook een geneesmiddel zoeken tegen diarree. In de "Index van ziekten" (p. 6) vindt u antidiarreeïca in de rubriek "2. Gastro-Intestinaal stelsel". Daar zult u zien dat de geneesmiddelen tegen diarree zich in de tabellen 0164 en 0165 bevinden.
